EFFECTS OF REPEATED USE OF EXOTIC ORNAMENTAL PLANTS ON INVASION PATTERNS

Oguz Sariyildiz\textsuperscript{a}, Sandra Wilson\textsuperscript{b}, Gail M. Hansen\textsuperscript{b}, Basil Iannone\textsuperscript{a}

\textsuperscript{a}School of Forest Resources and Conservation, \textsuperscript{b}Dept. Of Environmental Horticulture, University of Florida

\begin{itemize}
  \item \textbf{Traits} (EDDMapS, FLEPPC, IFAS Assessment, field study, remote sensing)
  \item \textbf{Environmental factors} (e.g., land change, land use, canopy height, canopy density from locations)
  \item \textbf{Propagule pressure} (market availability, sales and planting records)
  \item IBM
  \item Long term invasion patterns for emergent species
\end{itemize}

Graphical representation of invasion patterns over time, with data points indicating increasing count from 1994 to 2017.

Iannone et al. 2015

\begin{itemize}
  \item Comparison graph showing Propagule Pressure and Responding Invasion over time.
  \item Axes: Time (0 to 50) and Count (0 to 250K).
\end{itemize}
